

## RoHS Compliance Statement

Texmate, Inc. has transitioned its production and materials procurement processes to be 100% RoHS compliant in response to increasing world-wide demand and environmental regulations. Please note the following:

All Texmate products are 100% RoHS (1, 2 and 3) compliant and Texmate products meet requirements of the applicable RoHS requirements for the 10 banned substances.

1. If requested, we can issue a certificate of compliance that ships with your order.
2. Texmate recognizes that some customers with applications subject to extreme operating conditions or other high reliability requirements would prefer SnPb (tin/lead) solders. To meet this need, Texmate is maintaining a small-batch, SnPB solder fabrication capability. If you need this, please contact us (above or orders@texmate.com). In addition, we continue to evaluate other options including conformal coating and potting of key circuits.

Texmate, Inc. takes its responsibility for environmental stewardship seriously. In addition to our RoHS transition, we have waste reduction and recycling programs in process, and we have established a Conflict Minerals policy.
