UM-35-DCV

**2/20/200 Volt DC Meter
3 1/2 DIGIT with 0.56" LEDs
in a NEMA type 1 Style Case**

**A cost-effective Utility Meter for General Purpose
Single or Differential DC Voltage Measurement.**

General Features

The UM-35-DCV is a very reliable utility DC voltage measuring meter with three built-in ranges of 2V/20V/200V. It is a cost-effective solution to most DC voltage measuring applications since it may be used to measure single-ended as well as differential signals and is easily scaled to any desired process engineering unit.

Typical Application Connections

DC Volts Single-ended measurement with
a Resolution of 100 milliVolt.

DC Volts Differential measurement with
a Resolution of 100 milliVolt.

Max CMV (common mode voltage) is 50V.*

*Because CMV is common with meter ground, higher CMV inputs to a max of 1KV, require mechanical isolation of all contactable meter parts.

Specifications

Input Configuration:Single-ended, however the isolated power supply enables differential measurements up to a maximum common mode of 50V.*
Optional zero pot to offset the reading displayed.

Component Layout

Decimal selection is made by moving the jumper to the indicated position on the header for the decimal required on the front of the display board.

Decimal Point Selection

To open meter, insert a flat head screwdriver or similar instrument in both slots on the side of the cover and pry open. The UM-Series meters slide out from the front of the case as a complete assembly.

Signal Conditioning Components

INPUT RANGE Header

Range values are marked on the PCB. After selecting a new range with the single jumper clip, recalibration is required.

SPAN Potentiometer (Pot)

The 15 turn SPAN pot is always on the right side (as viewed from the front of the meter). Typical adjustment is 100% of the input signal range.

ZERO Potentiometer (Pot)

The Optional ZERO pot when installed is always to the left of the SPAN pot (as viewed from the front of the meter). Typically it enables the displayed reading to be offset ± 100 counts.

Optional Face Plate Descriptors

AC	V	kV	kVAr	mAr	Hz	RPM
V	mV	min	PF	F	G	Cap
DC	kVAr	μ A	PSIG	mS	W	psi
kW	W	kWh	pH	%	K	kPa
A	mbar	mA	MW	kA	RPS	MW
mWs	μ m	kW/s	I	I/sec	mi	cm
DRP	mm/s	l/min	mm	kg/sec	lbs	kg/hr
FT	W/s	l/min	mm	W/s	kg	W

To customize the face plate, clear adhesive label containing various popular descriptors may be ordered. Choose the descriptor desired, peel off the adhesive backing and align the descriptor in the center right of the faceplate.

Calibration Procedure

1. Select the required full scale voltage range by repositioning the jumper clip on the Range Select Header. A range of 2, 20 or 200V DC full scale may be selected.
2. Apply an input of 0 volts. The meter will autozero and display 0000. If the zero needs to be offset, order the ID05 option and adjust Zero Offset pot until the meter reads 0000.
3. Apply a known high input signal that is within the full scale voltage range selected.
4. Adjust the Span Pot until the meter displays the required reading for the signal being applied. e.g. 1VDC=1.000
5. The UM-35-DCV is now calibrated and ready for use.
(Whenever you select a new range, you must re-calibrate to meet the specified accuracy.)

Connector Pinouts

This meter uses plug-in type screw terminal connectors for all connections.

Connectors

This meter uses plug-in type screw terminal connectors for all input and output connections. The power supply connections (pins 14 and 15) have a unique plug and socket outline to prevent cross connection. The main board uses standard right-angled connectors.

WARNING: AC and DC input signals and power supply voltages can be hazardous. Do Not connect live wires to screw terminal plugs, and do not insert, remove or handle screw terminal plugs with live wires connected.

UM Case Dimensions and Panel Cutouts

Clear Lockable Water-proof Cover

The clear lockable cover is designed to be dust and waterproof to NEMA-4X, IP65 standards. The assembly consists of a base and a cover with a cam hinge and key-lock fastening mechanism. An O-ring, or neoprene gasket forms a seal between the base and the panel. The cam hinge prevents the cover from closing when opened until pushed closed. The cover has a tapered recess that, when closed, forms a seal with a tapered spigot on the base. A key-lock employs a cam locking device to force the spigot into the recess, ensuring seal integrity. A safety catch keeps the cover closed even when the key is removed, and the keyhole can be used to attach a safety seal clip, preventing unauthorized opening.
